Emile Jouannet

Paris, France (open to relocation) · linkedin.com/in/emile-jouannet-1225aa251 · github.com/Symbioose

6-month end-of-studies internship, February – August 2027 · Graduating June 2027

EXPERIENCE

Achille.ai (Station F) — Full-Stack Engineer Intern Paris · Sep 2025 – Feb 2026

- Sole engineer on **Achille Insights**: designed, shipped and operated a multi-tenant GenAI platform that analyses customer-support tickets with LLMs, in production with clients within 5 months (FastAPI, Vue.js, PostgreSQL, Azure).
- Integrated 4 client ecosystems (Zendesk, Gorgias, Intercom, Shopify) with rate-limit-safe ingestion and 2–6 months of history backfilled per client; real-time Slack alerts and daily anomaly detection.
- Kept it fast and cheap: dashboard queries over 60k tickets cut from seconds to near-instant (composite indexes, caching); LLM cost under €1 per client per month.

YouGotIt — Founder Paris · Mar 2026 – present

- AI voice role-play simulator: learners practise difficult professional conversations with LLM characters and get scored feedback. Started solo at the Mistral AI Worldwide Hackathon (finalist, top 7 of 150+).
- Designed to scale up to 150 seats; scoped, priced and built end to end (Next.js, Supabase, pgvector, voice STT/TTS).

Bouygues Group, Central Innovation — Applied AI project (EPITA partnership) Paris · 2026 – present

- Humanoid robotics on the AgiBot X2 Ultra: LiDAR-based mapping and obstacle avoidance (Python, ROS 2, MuJoCo).

SupBiotech — Teaching Assistant, Python & SQL Paris · Feb 2026 – present

- Teach Python and SQL to ∼150 biotech undergraduates.

COMPETITIONS — 9 hackathon awards in 2026, incl. 5 first places

- **National finalist, 42nd of 1,000+** — Gradient by Prologin × Mistral AI (Aug 2026): 36-hour algorithmic final in Python, no internet, no AI.
- **1st place, solo, 60+ teams** — Alan × Mistral AI Health Hackathon (Apr 2026): agent that compiles Oura/Garmin data into an LLM-maintained health wiki (Karpathy's LLM knowledge-base pattern), spots multi-day burnout patterns and calls the user by voice (Mistral, Voxtral).
- **1st place, NVIDIA track** — RAISE Summit (Jun 2026): agent combining 11+ data sources to predict solar-panel damage, with a live drone video feed for on-site inspection.
- **1st place in track & 2nd overall** — Unaite × Y Combinator (Jun 2026, team of 5): dark-web monitoring agents that flag emerging risks for traders.
- Also 1st at HrFlow.ai and GDG EPITA; 2nd at Project Europe Barcelona (below) and {Tech: Europe}; finalist at the Mistral AI Worldwide Hackathon.

PROJECTS

- **Brain-scored outreach** (Project Europe Barcelona, 2nd place Clay track, Apr 2026) — self-improving agent loop that scores outreach messages by their predicted brain response, using Meta's TRIBE v2 fMRI-prediction model released weeks earlier, run on a CoreWeave B200 GPU.
- **Claude/Codex Account Switcher** — open-source macOS menu-bar tool (Python, 70+ GitHub stars, 300+ downloads): switch accounts, track usage, fail over automatically at rate limits; distributed via Homebrew.
- **Git worktrees for Mistral Vibe** (Mistral hackathon, Jul 2026) — forked Mistral's open-source coding agent so parallel subagents each work in their own copy of the repo: 12.5× faster and 5.6× cheaper on a 96-file audit, same results.
- **AvisGenius** (2025) — AI SaaS automating replies to Google/TripAdvisor reviews, grounded with RAG on each business's data; built and launched solo (Next.js, Supabase, Stripe).

EDUCATION

EPITA — Engineering degree (Master's level), AI & Data Science major (SCIA) Paris · 2022 – 2027

Relevant coursework: Machine Learning, NLP, Computer Vision, Data Engineering, Probability & Statistics, Multi-Agent Systems, Distributed Algorithms.

Institut Teknologi Sepuluh Nopember — Exchange semester Indonesia · Feb – Jun 2024

SKILLS

AI: PyTorch, Hugging Face, RAG, pgvector, LLM APIs, agents, evals, prompt engineering, voice (STT/TTS), scikit-learn, pandas
Engineering: Python, TypeScript, C/C++, SQL, FastAPI, Next.js, Vue.js, PostgreSQL, Supabase, REST APIs, Docker, Kubernetes, Azure, CI/CD (GitHub Actions), Linux, Git, pytest
Robotics: ROS 2, MuJoCo, LiDAR mapping
Languages: French (native), English (fluent, TOEIC 965/990)
